

ABTRACT

The saw blade for reciprocating saws is an offset saw blade for attaching to a reciprocating saw for making flush cuts around a ninety degree surface. The saw blade includes a mounting arm and an offset blade portion. The blade portion is attached to the mounting arm by a connector arm. The blade portion includes a row of saw teeth on at least one edge of the blade portion. The saw blade also includes at least one stabilizer, such as a gusset plate, disposed along the connector arm for increasing the rigidity of the saw blade.
